

SYMMETRY PRODUCT HIGHLIGHT

Accelerated Screw Drive for Vertical Platform Lift (VPL)

For those who prefer the speed of a hydraulic lift but the simplicity of a screw drive, the Accelerated Screw Drive option is an excellent choice. Our Accelerated Screw Drive for the Vertical Platform Lift travels at 20 feet per minute. The industry standard speed for a VPL with a screw drive is 10 feet per minute.

The Accelerated Screw Drive option is available for all Symmetry Vertical Platform Lift models. This drive option fits into the same tower space and height as our other VPL drive options, so special accommodations are not required for installation.

Customers will reach their designated landing more quickly when they choose our Accelerated Screw Drive option.
