

SYMMETRY PRODUCT HIGHLIGHT

Flip-Up Ramp for VPL-UL and VPL-RL

Flip-up ramps can be used to access openings which are perpendicular to the tower on straight-through and 90° applications, and are available on all unenclosed lifts. Flip-up ramps can serve as a roll-off barrier in residential applications with a travel of 60 inches or less, or can be used in conjunction with a platform gate. Commercial applications using a flip-up ramp and platform gate will require a power gate operator to meet current code requirements.

Typically 2½ inches tall and 15 inches long, Symmetry's flip-up ramps are manufactured with durable steel and are available in custom lengths to fit your needs. Flip-up ramps automatically deploy or retract when entering or exiting the lower landing.

VPL-UL application in Ivory, with platform gate, with flip-up ramp deployed

VPL-UL application in Ivory, with platform gate, with flip-up ramp deployed

VPL-RL application in Ivory, without platform gate, with ramp retracted
